## Waste Generator Notification Fee

Effective December 28, 1992, Rule 1200-1-11-.08(2) of the Tennessee Hazardous Waste Management Fee Regulations requires new generators to submit a one-time application fee of \$50.00 along with their first-time notification. The fee must be received by the Department before an EPA ID Number can be assigned and the notification reviewed.

Please enter information requested below and return this letter to the above address along with your application fee to insure proper processing. NOTICE: Make your check payable to *Treasurer, State of Tennessee*.

Re: EPA ID Number  
Site Location: 4600 Highway 70  
White Bluff, TN. 37187-0188

Dear Mr. Gooch:

This letter will serve as official notice of your EPA ID Number TNR 00-000-5991 which should be used on all reports and correspondence submitted to the Department.

The EPA ID Number is assigned to this specific physical location. Should you ever relocate, you would be required to apply for a new EPA ID Number for that location.

**PLEASE NOTE:** If you generate greater than 100 kilograms (220 pounds) in any month, you must file an Annual Report with the Division of Solid Waste Management and pay a Generator Fee by the following March 1.

If you have further questions about this subject please contact Dennis Woodson at (615) 532-0487.

Sincerely,

*Barbara Donoho*

# HAZARDOUS WASTE FACILITY INSPECTION

## SITE INSPECTED

Tennsco Corporation  
Plant I - East Broad Street  
P. O. Box 606  
Dickson, Tennessee 37055  
TND 004035853

## PRIMARY CONTACT

Mickey Self

## INSPECTION DATE AND TIME

February 15, 1985  
Starting at 9:00 a.m.

## INSPECTOR AND REPORTER

Bob Gardner  
701 Broadway, B-30  
Nashville, Tennessee 37219-5403  
742-6649

## PURPOSE OF INSPECTION

This routine unannounced full inspection was conducted to evaluate Tennsco's compliance with the applicable requirements of the Rules Governing Hazardous Waste Management in Tennessee.

## EVALUATION BASIS

Generator of hazardous waste - Rule 1200-1-11-.03

## FACILITY DESCRIPTION

One hazardous waste is generated at this location - Flammable Liquid D001 consisting of bad paint, and paint equipment flush solvent. All waste is accumulated in 55-gallon drums and pumped into the transport tanker. Waste paint sludge from a high solids paint line has been evaluated and found to be non-hazardous. This waste is also sent to a secure landfill for disposal only because it can not be suitably handled at the local sanitary landfill.

## MANIFEST SUMMARY

<u>Date</u>	<u>Quantity</u>	<u>Date</u>	<u>Quantity</u>
1-07-83	2310 Gallon	2-01-84	4000 Gallon

Facility - Chem-Fuel - TND 000737510

COMMENTS

At the time of the last hazardous waste inspection on August 23, 1982, Tennsco had two plants located about two miles apart in Dickson with both generating a hazardous waste. Only the Broad Street plant had been assigned an identification number (TND 004035853). Wastes from both plants have been manifested under this I.D. number. Tennsco has been asked to submit a generator notification for the second plant located in the old Winner Boat facility.

INSPECTION FINDINGS

The following violations of Rule 1200-1-11-.03 were found at the time of inspection:

1. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator assures that the personnel training program, at a minimum be designed to ensure that employees are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems including where applicable: (1) procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment; (2) key parameters for automatic waste feed cut-off systems (if any); (3) communications or alarm systems; (4) response to fires or explosions; (5) response to ground-water contamination incidents; and (6) shutdown of operations. (0107)
2. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator assures that the personnel training program be reviewed annually by all employees who handle or manage hazardous waste. (0125)
3. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records and documents containing the job title for each position related to hazardous waste management and the name of the employee filling each job. (0126)
4. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records and documents containing a written job description for each position related to hazardous waste management. (0127)

HAZARDOUS WASTE FACILITY INSPECTION  
Tennsco Corporation  
Page 3

5. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records and documents containing a written description of the type and amount of both introductory and continuing training that will be given to each employee who handles or manages hazardous waste. (0128)
6. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records that document that all the required personnel training or job experience has been given to and completed by the employees who handle or manage hazardous waste. (0135)
7. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator retains training records on current employees who handle or manage hazardous waste while hazardous waste is being accumulated. Training records of former employees must be kept for at least three years from the date the employee last worked at the position which handles or manages hazardous waste. Personnel training records may accompany an employee transferred within the same company. (0145)
8. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator designs his contingency plan to minimize hazards to public health or the environment from fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water. (0157)
9. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes the actions employees must take to immediately respond to fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the accumulation area(s). (0165)
10. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate a hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how, whenever there is an imminent or actual emergency situation, the emergency coordinator (or his designee when the emergency coordinator is on call) will immediately: activate internal alarms or communication systems, where applicable, to notify all other affected employees; and notify appropriate State or local agencies with designated response roles if their help is needed. (0166)

11. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how, whenever there is a release, fire, or explosion the emergency coordinator will immediately identify the character, exact source, amount, and areal extent of any released materials. He may do this by observation or review of facility records and if necessary, by chemical analysis. (0167)
12. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the emergency coordinator will concurrently assess possible hazards to public health or the environment that may result from a release, fire, or explosion. The assessment must consider both direct and indirect effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water run-off from water or chemical agents used to control fire and heat-induced explosions. (0168)
13. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the emergency coordinator will immediately notify appropriate local authorities and the Tennessee Emergency Management Agency, if he determines that the facility has had a release, fire, or explosion which could threaten public health or the environment outside the facility, and then be available to help the appropriate officials decide whether local areas should be evacuated. (0169)
14. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how, during an emergency, the emergency coordinator will take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous waste at the facility. These measures must include, where applicable collecting and containing released waste, and removing or isolating containers. (0171)
15. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how, immediately after an emergency, the emergency coordinator will provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility. (0173)
16. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the emergency coordinator will ensure that, in the affected accumulation area(s): no waste that may be incompatible with the released material is stored in the accumulation area until clean-up procedures are completed; and all emergency equipment listed in the contingency plan is cleaned and fit for its intended use before hazardous wastes are stored in the affected accumulation area(s). (0174)

17. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the generator will notify the Commissioner, and appropriate local authorities, that the cleanup procedures have been completed and all emergency equipment has been cleaned and fit for its intended use before hazardous waste are stored in the affected accumulation area(s). (0175)
18. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the generator's will note in his files the time, date, and details of any incident that requires implementing the contingency plan and how, within 15 days after the incident, he will submit a written report on the incident to Commissioner. (0176)
19. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes the arrangements agreed to by local police departments, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services, as appropriate for the type of waste handled at the accumulation area and the potential need for the services of these organizations. (0177)
20. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate a hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan lists the names, addresses and phone numbers (office and home) of all persons qualified to act as emergency coordinator and keep this list up to date. Where more than one person is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates. (0185)  
The office phone number has not been listed.
21. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan includes the location, a physical description and a brief outline of the capabilities of each item on the list of emergency equipment at the accumulation area (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external) and decontamination equipment), where this equipment is required. (0197)
22. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan includes an evacuation plan for employees where there is a possibility that evacuation could be necessary. This plan must describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires). (0205)

23. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains a copy of the contingency plan and all revisions to the plan and submits them to all local police departments, fire departments, hospitals, and State and local emergency response teams that may be called upon to provide emergency services. (0207)
24. Rule 1200-1-11-.03(5)(b)1 requires a generator to submit an annual report to the Department by March 1 for the preceding calendar year. (0432) Reports have not been received for 1982 or 1983.
25. Rule 1200-1-11-.03(5)(b)1 requires a generator who ships his hazardous waste off-site to submit an annual report on forms provided by the Department and the form completed according to the instructions accompanying it. (0435)
26. Rule 1200-1-11-.03(4) requires each generator who ships hazardous waste off-site for storage, treatment, or disposal to submit along with the annual report an annual maintenance fee of 100 dollars (\$100). (0437)
27. Rule 1200-1-11-.03(4)(b)1(i) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator, if the waste is stored in containers, ensures that containers holding hazardous waste are always kept closed during storage, except when it is necessary to add or remove waste. (0447)
28. Rule 1200-1-11-.03(4)(b)1(ii) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator ensures that the date upon which each period of accumulation begins is clearly marked and visible for inspection on each container. (0515)
29. Rule 1200-1-11-.03(4)(b)1(iii) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator ensures that while hazardous waste is being accumulated on-site, each container and tank is labeled or marked clearly with the words, "Hazardous Waste". (0525)
30. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator accumulates the hazardous waste in a manner which will minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten public health or the environment. (0535) Area where waste is stored in drums was observed to be very cluttered making proper management difficult.

31. Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator ensures that the accumulation area(s) is equipped with a device, such as a telephone (immediately available at the scene of accumulation) or a hand held two way radio, capable of summoning emergency assistance from local police departments, fire departments, or State and local emergency response teams, unless none of the hazards posed by the waste accumulated warrant this kind of equipment. (0555) The closest phone is approximately 200 feet from the storage area and is judged to be too remote for calling in assistance.
32. Rule 1200-1-11-.93(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains adequate aisle space to allow the unobstructed movement of employees, fire protection equipment, spill control equipment, and decontamination equipment in any emergency, unless aisle space is not needed for any of these purposes.

ENNSEN CORP PLANT 1

PO BOX 606

DICKSON

TN 37055

Please complete and return to the above address.

Please correct any incorrect information on the label.

See the instruction pages and regulations for detailed

information for completing this form. For technical

assistance, call (615) 741-6237.

1. Enter the total amount of hazardous wastes generated during the year of Jan. 1, 1984 to Dec. 31, 1984, or, if no hazardous wastes were generated in the year of 1984, enter the amount of hazardous wastes generated from January 1 through April 30, 1985. Enter to the right the year the wastes were generated as 1984 or 1985.

110,054

1984 year

2a. Waste amount from fossil fuel combustion.

2b. Municipal incineration waste amount.

3a. Ore mining waste amount.

3b. Waste excluded by petition

4a. Applicable energy associated waste amount.

4b. Transportation spill waste amount.

5a. Cement kiln dust waste amount.

5b. Hazardous wastes no longer generated after April 30, 1985.

6a. Wastewater treatment plant influent waste amount. (See permit requirements.)

6b. Hazardous wastes produced from on-site treatment unless the original waste was excluded.

7a. Public Owned Treatment Works (POTW) sludge waste amount.

7b. Inactive site clean-up waste amount.

8. Enter the sum of lines 2a - 7b to the right

9. Enter the difference between line 1 and line 8(m).

110,054

10. If 1984 was entered in line 1, enter the amount of line 9 into line 10. If 1985 was entered in line 1, compute an estimated annual total amount of hazardous wastes generated by dividing line 9 by the number of months wastes were generated in the first four months of 1985 and multiplying by 12. If an alternative estimation method is used, check and attach documentation: ( ).

110,054

11. Enter the correct fee from Table 1 which is located at the end of this form. Use the waste amount from line 10 above to determine the fee.

4000.00

12. If an acutely hazardous waste was generated from January 1, 1984 through April 30, 1985 and shipped off-site for disposal, enter \$500.00. If this waste was not landfilled, check and attach documentation: ( ).

RE: Hazardous waste generator facility inspection  
NOTICE OF VIOLATION

Dear Mr. Self:

On June 19, 1986, a routine, unannounced hazardous waste generator inspection was conducted at Tennsco in order to determine this facility's compliance with applicable requirements of the Rules Governing Hazardous Waste Management in Tennessee. Violations noted during the inspection include the following:

Rule 1200-1-11-.03(4)(b)1(ii) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator ensures that the date upon which each period of accumulation begins is clearly marked and visible for inspection on each container. (0515)

Rule 1200-1-11-.03(4)(b)1(iii) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator ensures that while hazardous waste in being accumulated on-site, each container and tank is labeled or marked clearly with the words, "Hazardous Waste". (0525)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator ensures that the accumulation area(s) is equipped with portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas or dry chemical), spill control equipment, and decontamination equipment, unless none of the hazards posed by the waste accumulated warrent this kind of equipment. (0565)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator tests and Maintains all communications or alarm systems, fire protection equipment, where required, as necessary to assure it proper operation in time of emergency. (0585)

Rule 1200-1-11-.03(2)(d) requires generators to be responsible for maintaining an up-to-date notification file by notifying the Department in writing of significant changes in the information submitted within 30 days after such changes. (0027)

Rule 1200-1-11-.03(4)(b)1(ii) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator inspects the area where containers are stored, at least weekly, looking for leaks and for deterioration caused by corrosion or other factors. (0035)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator assures that the personnel training program be reviewed annually by all employees who handle or manage hazardous waste. (0125)

Rule 1200-1-11-.03(4)(b)(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records and documents containing the job title for each position related to hazardous waste management and the name of the employee filling each job. (0126)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records and documents containing a written job description for each position related to hazardous waste management (0127)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records and documents containing a written description of the type and amount of both introductory and continuing training that will be given to each employee who handles or manages hazardous waste. (0128)

Rule 1200-1-11-.03(4)(b)(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records that document that all the required personnel training or job experience has been given to and completed by the employees who handle or manage hazardous waste (0135)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator retains training records on current employees who handle or manage hazardous waste while hazardous waste is being accumulated. Training records of former employees must be kept for at least three years from the date the employee last worked at the position which handles or manages hazardous waste. Personnel training records may accompany an employee transferred within the same company. (0145)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how, during an emergency, the emergency coordinator's contingency plan describes how, during an emergency, the emergency coordinator will take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous waste at the facility. These measures must include, where applicable, collecting and containing released waste, and removing or isolating containers. (0171)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how, if the facility stops operations in response to a fire, explosion, or release, the emergency coordinator will monitor for leaks, pressure buildup, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate. (0172)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how, immediately after an emergency, the emergency coordinator will provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility. (0173)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the emergency coordinator will ensure that, in the affected accumulation area(s): no waste that may be incompatible with the released material is stored in the accumulation area until contingency plan is cleaned and is fit for its intended use before hazardous wastes are stored in the affected accumulation area(s). (0174)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the generator will notify the Commissioner, and appropriate local authorities, that the cleanup procedures have been completed and all emergency equipment had been cleaned and fit for its intended use before hazardous waste are stored in the affected accumulation area(s). (0175)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the generator's will note in his files the time, date, and details of any incident that requires implementing the contingency plan and how, within 15 days after the incident, he will submit a written report on the incident to Commissioner. (0176)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes the arrangements agreed to by local police departments, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services, as appropriate for the type of waste handled at the accumulation area and the potential need for the services of these organizations. (0177)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan includes the location, a physical description and a brief outline of the capabilities of each item on the list of emergency equipment at the accumulation area (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external and decontamination equipment), where this equipment is required. (0197)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.78 provided that the generator's contingency plan includes an evacuation plan for employees where there is a possibility that evacuation could be necessary. This plan must describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes (in cases where the primary routes could be blocked by releases of hazardous waste or fires). (0205)

As you can see, most of the violations noted are of a documentation nature and should be relatively easy to correct. A follow-up inspection will be conducted on August 12, 1986 to determine if these violations have been corrected.

Enclosed with this letter is a blank Hazardous Waste Stream Description sheet. Your previously submitted Hazardous Waste Description (dated 3-27-85 and signed by you) indicated a monthly maximum generation rate of 728 Kg, which is highly inaccurate according to the amount of waste shipped off-site from this facility as shown on your 1985 (and including through 6-2-86) manifests. Please recalculate your generation rate, complete this form, and return it to me at the address shown on the form.

I would like to thank you for your cooperation shown during the inspection during what was an obviously hectic day for you. Should you have any questions, or if I can be of any assistance to you, please feel free to call me at 742-6649.

Sincerely,

*Bob Vaughan*

Bob Vaughan

## OFFICE CORRESPONDENCE

TND 00-403-00835

SUBJECT: Tennsco Corp, Dickson Co., Variance for Plant I and II

FROM	TO	DATE
D	SWM	L & C

TY/lag L/M #8

[illegible]

DSW L&C

# PUBLIC NOTICE

The Commissioner of the Tennessee Department of Health and Environment is hereby giving notice of this tentative decision to grant a variance from classification as a waste, for spent flush solvent, Hazardous Waste Code D001, as generated at Tennsco Plant 1, TND 004035853, 402 E. Broad in Dickson, Tennessee 37055, because this hazardous material is recycled in a manner which will not pose a significant hazard to public health or the environment. This variance will only apply to the material identified in the request and only when it is managed as described in the request.

Tennsco Corporation at their Plant 1 generates spent solvent in their painting process. The spent solvent is recovered on-site by a distillation process and reused as it was originally used. The on-site recovery and reuse of this hazardous waste will reduce the risk to health and environment associated with hazardous waste transportation and disposal.

The procedures for determining that certain hazardous materials that are being recycled will no longer be classified as wastes are provided in Tennessee Rule 1200-1-11-.01(4) Variance from Classification as a Waste.

Comments and/or requests for a hearing on this tentative decision will be accepted for 30 days ending at 4:30 p.m. OCT 09 1987.

Comments or requests for a hearing should be sent to: Mr. Tom Tiesler, Director, Division of Solid Waste Management, Tennessee Department of Health and Environment, Customs House, 4th Floor, 701 Broadway, Nashville, Tennessee 37219-5403; phone (615) 741-3424.

The Commissioner will issue a final decision to either grant or deny the variance after receipt of comments and after the hearing (if any).

If you wish to review the draft variance, or wish further information, please contact: Division of Solid Waste Management Field Office, Tennessee Department of Health and Environment, Customs House, Room B-01, Nashville, TN 37219-5403; phone (615) 741-0654.

May 30, 1995

TND 00-403-5853

Tenneco Corporation (Plant 1)  
Attn: Mickey Self  
PO Box 606  
Dickson, TN 37055

Dear Mr. Self:

This letter is to inform you that your "variance from classification as a waste" has expired for the enclosed waste stream(s). If you are still generating this waste, you will need to update the information on the attached *Hazardous Waste Stream Report* so that our database remains current. The returned form, with any revisions, will serve as your official notification to the State on that waste, and as such, will require you to report on the waste stream in your Annual Report for 1995, which you will receive in January of 1996.

If we have not received the revised waste stream(s) by June 30, 1995, you will be considered a non-notifier and an inspection will be made by our field office. This could result in a Notice of Violation being written for possible enforcement action.

If you no longer generate this waste, please complete line 3 on the *Hazardous Waste Stream Report* under the heading "date no longer generated". Be certain the date is six digits (12-31-94, 09-11-94, etc.). Sign and date the back of the form (line 16) and send the corrected copy to my attention. The waste stream will then be closed out in our database thereby requiring no more paperwork from you in subsequent years (unless you reopen the waste stream).

If you have any question, you may contact me at (615) 532-0887.

Sincerely,

Dennis Woodson  
Environmental Specialist  
Waste Activity Audit

HAZARDOUS WASTE FACILITY INSPECTION

**SITE INSPECTED**

Tenneco Corp.  
TND 980845390  
Plant 2  
1st and Pickett St.  
Dickson, Tennessee 37055

**PRIMARY CONTACT**

Mickey Self

**INSPECTION DATE AND TIME**

April 4, 1985  
Starting at 9:00 a.m.

**INSPECTOR AND REPORTER**

Bob Gardner  
701 Broadway, B-01  
Nashville, Tennessee 37219-5403  
(615) 742-6649

**OTHER INSPECTION PARTICIPANTS**

None

**PURPOSE OF INSPECTION**

This routine full inspection was conducted to evaluate Tenneco's compliance with the applicable requirements of the Rules Governing Hazardous Waste Management in Tennessee.

**EVALUATION BASIS**

Generator

**FACILITY DESCRIPTION**

One hazardous waste is generated at this location - flammable liquid DD01 consisting of bed paint, and paint equipment flush solvent. All waste is accumulated in 55-gallon drums and pumped into the transport tanker. Waste paint sludge from a high solids paint line has been evaluated and found to be non-hazardous. This waste is also sent to a secure landfill for disposal only because it can not be suitably handled at the local sanitary landfill. In the past all hazardous wastes were shipped to Chem-Fuel (TND000737510) on a manifest using Tenneco's plant 1 identification number. A generator notification for this plant was made on 3/27/85.

At the time of inspection 80 to 90 drums of waste was on hand. Plans are being made to ship to AM Chemical.

HAZARDOUS WASTE FACILITY INSPECTION  
Tenneco Corp.  
Page 2

INSPECTION FINDINGS

The following violations of Rule 1200-1-11-.03 were found at the time of inspection:

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator assures that the personnel training program, at a minimum be designed to ensure that employees are able to respond effectively to emergencies by familiarizing them with emergency procedures, emergency equipment, and emergency systems including where applicable; (1) procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment; (2) key parameters for automatic waste feed cut-off systems (if any); (3) communications or alarm systems; (4) response to fires or explosions; (5) response to ground-water contamination incidents; and (6) shutdown of operations. (0107)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator assures that the personnel training program be reviewed annually by all employees who handle or manage hazardous waste. (0125)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records and documents containing the job title for each position related to hazardous waste management and the name of the employee filling each job. (0126)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records and documents containing a written job description for each position related to hazardous waste management.

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records and documents containing a written description of the type and amount of both introductory and continuing training that will be given to each employee who handles or manages hazardous waste. (0128)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains records that document that all the required personnel training or job experience has been given to and completed by the employees who handle or manage hazardous waste. (0135)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator retains training records on current employees who handle or manage hazardous waste while hazardous waste is being accumulated. Training records of former employees must be kept for at least three years from the date the employee last worked at the position which handles or manages hazardous waste. Personnel training records may accompany an employee transferred within the same company. (0145)

HAZARDOUS WASTE FACILITY INSPECTION

Tenneco Corp.

Page 3

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator designs his contingency plan to minimize hazards to public health or the environment from fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water. (0157)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes the actions employees must take to immediately respond to fires, explosions, or any unplanned sudden or nonsudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water at the accumulation area(s). (0165)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how, whenever there is an imminent or actual emergency situation, the emergency coordinator (or his designee when the emergency coordinator is on call) will immediately activate internal alarms or communication systems, where applicable, to notify all other affected employees; and notify appropriate State of local agencies with designated response roles if their help is needed. (0166)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how, whenever there is a release, fire, or explosion the emergency coordinator will immediately identify the character, exact source, amount, and areal extent of any released materials. He may do this by observation or review of facility records and if necessary, by chemical analysis. (0167)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the emergency coordinator will concurrently assess possible hazards to public health or the environment that may result from a release, fire, or explosion. This assessment must consider both direct and indirect effects of any toxic, irritating, or asphyxiating gases that are generated, or the effects of any hazardous surface water run-off from water or chemical agents used to control fire and heat-induced explosions. (0168)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the emergency coordinator will immediately notify appropriate local authorities and the Tennessee Emergency Management Agency, if he determines that the facility has had a release, fire, or explosion which could threaten public health or the environment outside the facility, and then be available to help the appropriate officials decide whether local areas should be evacuated. (0169)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how, during an emergency, the emergency coordinator will take all reasonable measures necessary to ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous waste at the facility. These measures must include, where applicable, collecting and containing released waste, and removing or isolating containers. (0171)

HAZARDOUS WASTE FACILITY INSPECTION

Tenneco Corp

Page 4

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how, immediately after an emergency, the emergency coordinator will provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility. (0173)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the emergency coordinator will ensure that, in the affected accumulation area(s), no waste that may be incompatible with the released material is stored in the accumulation area until clean-up procedures are completed; and all emergency equipment listed in the contingency plan is cleaned and fit for its intended use before hazardous wastes are stored in the affected accumulation area(s). (0174)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the generator will notify the Commissioner, and appropriate local authorities, that the cleanup procedures have been completed and all emergency equipment has been cleaned and fit for its intended use before hazardous waste are stored in the affected accumulation area(s). (0175)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes how the generator's will note in his files the time, date, and details of any incident that requires implementing the contingency plan and how, within 15 days after the incident, he will submit a written report on the incident to Commissioner. (0176)

Rule 1200-1-11-.03(4)(1)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan describes the arrangements agreed to by local police departments, fire departments, hospitals, contractors, and state and local emergency response teams to coordinate emergency services, as appropriate for the type of waste handled at the accumulation area and the potential need for the services of these organizations. (0177)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan lists the names, addresses and phone numbers (office and home) of all persons qualified to act as emergency coordinator and keep this list up to date. Where more than one person is listed, one must be named as primary emergency coordinator and others must be listed in the order in which they will assume responsibility as alternates. (0185)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan includes the location, a physical description and a brief outline of the capabilities of each item on the list of emergency equipment at the accumulation area (such as fire extinguishing systems, spill control equipment, communications and alarm systems (internal and external) and decontamination equipment), where this equipment is required. (0197)

HAZARDOUS WASTE FACILITY INSPECTION

Tenneco Corp.

Page 5

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator's contingency plan includes an evacuation plan for employees where there is a possibility that evacuation could be necessary. This plan must describe signal(s) to be used to begin evacuation, evacuation routes, and alternate evacuation routes, (in cases where the primary routes could be blocked by releases of hazardous waste or fire). (0205)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator maintains a copy of the contingency plan and all revisions to the plan and submits them to all local police departments, fire departments, hospitals, and State and local emergency response teams that may be called upon to provide emergency services. (0207)

Rule 1200-1-11-.03(4)(b)1(i) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator, if the waste is stored in containers, ensures that containers holding hazardous waste are always kept closed during storage, except when it is necessary to add or remove waste. (0447)

Rule 1200-1-11-.03(4)(b)1(ii) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator ensures that the date upon which each period of accumulation begins is clearly marked and visible for inspection on each container. (0515)

Rule 1200-1-11-.03(4)(b)1(iii) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator ensures that while hazardous waste is being accumulated on-site each container and tank is labeled or marked clearly with the words "HAZARDOUS WASTE". (0525)

Rule 1200-1-11-.03(4)(L)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator accumulates the hazardous waste in a manner which will minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to air, soil, or surface water which could threaten public health or the environment. (0535)

Rule 1200-1-11-.03(4)(b)1(iv) allows a generator to accumulate hazardous waste on-site for 90 days or less without a permit or without interim status under Rule 1200-1-11-.07 provided that the generator ensures that the accumulation area(s) is equipped with a device, such as a telephone (immediately available at the scene of accumulation) or a hand-held two way radio, capable of summoning emergency assistance from local police departments, fire departments, or State and local emergency response teams, unless none of the hazards posed by the waste accumulated warrant this kind of equipment. (0555)

Rule 1200-1-11-.07(1)(b)1(i) prohibits a new hazardous waste management facility, in Tennessee, from treating, storing or disposing of hazardous waste unless the owner or operator has a permit under the Tennessee Hazardous Waste Management Act. (3500)  
Waste on hand had been stored more than 90 days.

DSWM Lt.C

## PUBLIC NOTICE

The Commissioner of the Tennessee Department of Health and Environment is hereby giving notice of this tentative decision to grant a variance from classification as a waste, for spent flush solvent, Hazardous Waste Code D001, as generated at Tennsco, Plant 2, TND 980845390, corner of 1st Street and Pickett in Dickson, Tennessee 37055, because this hazardous material is recycled in a manner which will not pose a significant hazard to public health or the environment. This variance will only apply to the material identified in the request and only when it is managed as described in the request.

Tennsco Corporation at their Plant 2 generates spent solvent in their painting process. The spent solvent is recovered on-site by a distillation process and reused as it was originally used. The on-site recovery and reuse of this hazardous waste will reduce the risk to health and environment associated with hazardous waste transportation and disposal.

The procedures for determining that certain hazardous materials that are being recycled will no longer be classified as wastes are provided in Tennessee Rule 1200-1-11-.01(4) Variance from Classification as a Waste.

Comments and/or requests for a hearing on this tentative decision will be accepted for 30 days ending at 4:30 p.m. OCT 12 1987.

Comments or requests for a hearing should be sent to: Mr. Tom Tiesler, Director, Division of Solid Waste Management, Tennessee Department of Health and Environment, Customs House, 4th Floor, 701 Broadway, Nashville, Tennessee 37219-5403; phone (615) 741-3424.

The Commissioner will issue a final decision to either grant or deny the variance after receipt of comments and after the hearing (if any).

If you wish to review the draft variance, or wish further information, please contact: Division of Solid Waste Management Field Office, Tennessee Department of Health and Environment, Customs House, Room B-01, Nashville, TN 37219-5403; phone (615) 741-0654.

INSPECTION REPORT

SITE/OPERATION INSPECTED:

Tenneco Corporation - Plant II & III  
740 SE 8th St  
P.O. Box 605  
Jackson, TN 37602

OWNER/OPERATOR/PRIMARY CONTACT:

Mich, Self  
445-8035

DATE AND TIME OF INSPECTION:

November 25, 1987  
9:00 a.m.

REPORT PREPARED BY:

Jim Golder  
701 Broadway, N.O.  
New Orleans, LA 70112-5403  
(504) 581-0001

NAMES AND AFFILIATIONS OF OTHER INSPECTION PARTICIPANTS:

None

PURPOSE OF INSPECTION:

This routine unscheduled inspection was conducted to evaluate Tenneco's compliance with the applicable requirements of the Resource Conservation and Recovery Act in Tennessee.

FACILITY DESCRIPTION:

Tenneco Plant II and III manufactures office cabinets. The hazardous waste generated at these plant is a D001 waste solvent. Tenneco has a variance for the recovery of the solvent of this waste.

INSPECTION FINDINGS:

No violations were apparent during the inspection. All the conditions of the variance were met at the time of the inspection.

Jim Golder

Re: Drum dump site on Tenneco Property (behind former Winner Boat Plant)

Dear Mr. Self:

On December 1, 1992 Jim Cornwell and I met with you and Tenneco staff where we inspected the drum dump site on Tenneco property behind the former Winner Boat Plant. We observed discolored soil and deteriorated barrels, many of which contained a hardened resin, in two (2) cells which are located some 300' behind the building. One cell had been partially disturbed, but you informed me that no waste had been removed.

The Division of Solid Waste Management requires that certain precautions be taken during the remediation process. As waste is removed from the cells, and different waste types are encountered, separate staging or holding areas are required prior to running analysis. If indeed, there is more than one (1) waste type, then representative sampling can easily be performed on each waste type to determine if it is hazardous. Also, after the waste is totally removed from the cells, soil samples must be taken on the bottom of the cells to assure that a proper closure has been achieved. If soil discoloration is visible in certain areas after removal of the waste, a TCLP as well as a total analysis would be in order.

After this is done, please contact me for a follow-up inspection of the site. Also, after re-inspecting the site and reviewing all analytical data, the Division will consider your request for a special waste permit.

If there are any questions please contact me at (615) 741-0654.

Sincerely,

*Wayne Harbin*

# Hazardous Waste Stream Report

Tennessee Department of Environment and Conservation, Division of Solid Waste Management,  
Fifth Floor, L & C Tower, 401 Church Street, Nashville, TN 37243-1835

DSWM  
L&C

1. Organization's full name at facility.  
SEARCO CORPORATION PLANT 2/3

2. Waste name. Use standard name from regulations whenever possible.  
FLAMMABLE LIQUID

3. Give the years that this waste has been generated, e.g. 1975, 1982-.  
(SINCE 1980) 4 YEARS

Date no longer generated.  
11/10/93  
0164-93

4. Circle all appropriate hazard criteria below.  
Ignitable (a), EP toxic (b), Corrosive (c), Reactive (e), Other toxic (f), TCLP (g).

EPA waste codes. (Primary first; six maximum.)  
0001

SIC code for generating process.

5. Physical form

% Solid	% Water	Vol. to wt. conversion (pounds/gallon)	If used for fuel, chlorine content (PPM)	BTU per pound
100-200 (S)	75.0	0.006	0.0	0.0

6. Generation rates. Supply all rates in kilograms.

Monthly maximum (kg)	Annual average (kg)	Maximum amount stored on-site (kg)	Maximum days stored
720.0	4,360.0	2,184.0	90

7. DOT shipping name  
FLAMMABLE LIQUID

DOT hazard class  
Flam. liquid

DOT ID code  
07 1993

8. Describe generation process.  
END PRENT AND PAINT TRIMMER MIXED FOR PAINT EQUIPMENT CLEAN-UP.

DELETE THIS STREAM

9. Chemical Characteristics.

Flash point	Reactive code	Concentration units. For EP toxic and TCLP wastes, use PPM. % volume ( ), % weight ( ), PPM ( )

Major and hazardous constituents. Give range of values at right.

	lower value	upper value

10. If this waste is recovered, reclaimed, recycled or reused, describe how.

Solid & Hazardous Waste

# LIQUID WASTE PAINT

TND 98-044-539  
STREAM #4 **BLWN**

11. Annual Generation and Handling Data: If the waste was shipped offsite, summarize in block (a) and submit an Offsite Shipping Report. Report onsite handling in blocks (b) - (d). For offsite or onsite handling that requires interim status or a permit, use "W", "S", or "M" codes from the instructions. For other handling, use "H" codes.

Report Year: 1994	Amount generated during year (kg): <b>60,909,103,636</b>	Amount onsite in temporary storage on the first day of year (kg): <b>0</b>	Amount onsite in temporary storage on the last day of year (kg): <b>0</b>
(a) Total handled Offsite: <b>60,909,103,636</b> TSDR handling/Waste management methods: <b>S01/T50</b>		Amount Handled Onsite: <b>—</b> TSDR handling/Waste management methods: <b>—</b>	Amount Handled Onsite: <b>—</b> TSDR handling/Waste management methods: <b>—</b>
Amount handled Onsite: <b>—</b> TSDR handling/Waste management methods: <b>—</b>		Amount Handled Onsite: <b>—</b> TSDR handling/Waste management methods: <b>—</b>	Amount Handled Onsite: <b>—</b> TSDR handling/Waste management methods: <b>—</b>

12. Specify your actual hazardous waste generation and final reduction goal as ratios of hazardous waste generated to the item, service or intermediary produced in its standard production units.

This year's actual ratio: <b>0</b>	Goal year's ratio: <b>0</b>	Goal Year: <b>0</b>	If no numeric goal has been set, describe your efforts to set one in line 15 below: <b>0</b>
------------------------------------	-----------------------------	---------------------	--

13. Check the efforts undertaken to reduce the volume and/or toxicity in the generation of this waste during the reported year. This includes the efforts undertaken in previous years that affected the reported year. The reduction effort relates to generation processes and not treatment methods.

- a. Reformulation/redesign of product: (a) **0**
- b. In process recycling: (b) **0**
- c. Equipment/technology modification: (c) **0**
- d. Substituting raw materials: (d) **0**
- e. Improved operations: (e) **0**
- f. Reduction research/planning: (f) **0**
- g. No effort: (g) **0**
- h. Other - briefly explain here: (h) **0**

14. Note the helpfulness of the items below that affected your hazardous waste reduction plan and its results. To the right of each item, circle one code: YES, this item helped reduction; NO, it hurt reduction; or NA, it was not necessary or did not affect reduction. See the instructions for further explanation.

a. Training or technical assistance: (a) <b>0</b> NA <b>0</b> YES <b>0</b>	g. High costs of haz. waste mgmt.: (g) <b>0</b> NA <b>0</b> YES <b>0</b>
b. Technical feasibility: (b) <b>0</b> NA <b>0</b> YES <b>0</b>	h. Accidental generation: (h) <b>0</b> NA <b>0</b> YES <b>0</b>
c. Economic practicality: (c) <b>0</b> NA <b>0</b> YES <b>0</b>	i. Other - describe here: (i) <b>0</b> NA <b>0</b> YES <b>0</b>
d. Measurement/accounting methods: (d) <b>0</b> NA <b>0</b> YES <b>0</b>	
e. In hazardous waste regulations: (e) <b>0</b> NA <b>0</b> YES <b>0</b>	
f. Implementation experience: (f) <b>0</b> NA <b>0</b> YES <b>0</b>	

15. Narratives provide additional explanation of any of the above data that will show your efforts to reduce the generation of this hazardous waste or describe impediments to its reduction.

**COMPANY IS MOVING FROM HIGH SOLIDS PAINT TO POWDER COATING AT THIS FACILITY. PLANS ARE TO HAVE POWDER IN OPERATION BY FALL, 1995. THIS WILL NEARLY ELIMINATE H.W. GENERATION.**

**0 DURING 1994 A SPECIAL EFFORT WAS MADE TO PUSH MORE WASTE PAINT INTO THE RECYCLABLE MATERIAL STREAM. PRODUCTION WAS UP ABOUT 10% OVER 1993 WHILE WASTE GENERATION WAS DOWN ABOUT 15% OR A NET REDUCTION OF 25% IN WASTE GENERATION.**

16. Certification: I certify that the information given on this form is true, accurate and complete.  
Signature: **Mike B. MBR** TITLE: **Exec Asst** DATE: **2-2-95**

## RCRA Inspection Report

### Inspector and Author of Report

Tom Yates, Environmental Specialist

### Facility Information

Tennisco Plant 2/3  
PO Box 606  
First & Pickert Street  
Dickson Tennessee 37056  
TND 98-004-5390  
(615) 446-8000

### Responsible Official

Mickey B. Self

### Inspection Participants

Ed Owens, Tennisco  
Woody Adams, Tennisco

### Date and Time of Inspection

February 7, 1996  
Approximately 8:30 a.m.

### Applicable Regulations

Tennessee's Hazardous Waste Management Regulations (Tennessee Rule Chapter 1200-1-11)

### Purpose of Inspection

To conduct an unannounced hazardous waste generator compliance evaluation inspection to determine Tennisco's compliance status with Tennessee's Hazardous Waste Management Regulations.

### Facility Description

Tennisco manufactures metal welded cabinets, lockers, shop equipment and filing cabinets. Tennisco was originally Diebold Company and began operation in 1958. In January 1962, Diebold sold the company and it became Tennisco. Tennisco is comprised of six separate facilities located in Dickson and employs approximately 300 people. Plant 2/3, the object of this inspection, consists of two buildings located on one contiguous site and is considered one facility, has one EPA identification number, and is referred to as Plant 2/3 to acknowledge that there are two production buildings on the site. The Plant 2/3 buildings were acquired in 1980 and production began around that time. The production processes

used at Plant 2/3 include stamping, welding, shaping and painting. The hazardous wastes are generated from the painting processes. The paint processes used in Plant 2 of the Plant 2/3 facility include electrostatic spray paint booths, hand spray areas, and robotics spray areas. The paint processes used at Plant 3 of the Plant 2/3 facility include an electrostatic disk system, a hand spray area and a high solids baking enamel paint. A new powder paint system is being installed and expected to be operating in the near future. Tennsco anticipates a significant hazardous waste reduction to result from the change to the powder paint system. Paint waste from overspray and waste from cleaning paint equipment are the hazardous waste generated from the painting processes. Drums used for satellite accumulation of these hazardous wastes are located near the painting equipment. When possible, paint wastes are reused by blending with new paint. Waste not reused is shipped off site as hazardous waste. A review of the annual report data submitted in 1995 shows Tennsco Plant 2/3 generated over 1000 kg of hazardous waste per month for 12 months in 1994. A review of the manifest shows M & M Chemical and Equipment Company and Fisher Industrial Services were used for transportation, treatment and/or disposal of their hazardous waste.

A small amount of waste oil is generated from equipment maintenance. This is handled by Industrial Oil Service and M & M Chemical and Equipment Company.

#### Findings

The following violations were noted during this inspection:

Rule 1200-1-11-03(4)(c)

2. Except as provided in parts 6, 7 and 8 of this subparagraph, a generator may accumulate hazardous waste on-site for 90 days or less without a permit or without having interim status, provided that:
  - (ii) The date upon which each period of accumulation begins is clearly marked and visible for inspection on each container;
  - (iii) While being accumulated on-site, each container and tank is labeled or marked clearly with the words, "Hazardous Waste".

The main hazardous waste accumulation area where hazardous waste is accumulated prior to off-site shipment was found to have, based on Mr. Self's and my count, 36 drums containing hazardous waste which had no labels, hazardous waste markings and were not marked with the required accumulation date. This violation is considered high priority and subject to continued enforcement action irrespective of the correction date given in the accompanying Notice of Violation.

Take the necessary steps to see that all drums and containers of hazardous waste are always properly marked, labeled and dated.

Rule 1200-1-11-.05(3)

(c) Required Equipment - All facilities must be equipped with the following, unless none of the hazardous posed by waste handled at the facility could require a particular kind of equipment specified below:

1. An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;
2. A device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency assistance from local police department, fire department, or State of local emergency response teams;
3. Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment.

The main hazardous waste accumulation and storage area between the fabricating building and paint storage building did not have an alarm or emergency communication system immediately available at the scene of operations and adequate spill control equipment was not provided.

If a phone or similar device is used for emergency communication it should be located near enough to the accumulation area to be immediately available. If a two-way radio system is used a definite procedure for its use should be established to insure it will be effective and in good working condition if needed. This procedure should be demonstrable at inspections.

Rule 1200-1-11-.05(3)

(f) Required Aisle Space - The owner or operator must maintain aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

Aisle space for unobstructed movement of emergency equipment was not provided in the hazardous waste accumulation area.

The hazardous waste drums and containers in the accumulation area should be organized and maintained so that there is adequate aisle space for unobstructed access by emergency equipment and so labels, markings, etc., are clearly visible. A definite area or space where hazardous waste containers will be placed should be designated. Signs, painted lines, fences and similar items are useful in accomplishing this.

Rule 1200-1-11-.05(9)

- (e) Inspections - The owner or operator must inspect areas where containers are stored, at least weekly, looking for leaks and for deterioration caused by corrosion or other factors.

Weekly inspections of hazardous waste containers and the hazardous waste accumulation area and a log of these inspections was not done.

Inspect the hazardous waste accumulation area and containers at least once a week and maintain a log which will at least include date and time of the inspection, the name of the inspector, a notation of the observations made and the date and nature of any repairs or other remedial actions.

Rule 1200-1-11-.03(4)(e)

5. (i) A generator may accumulate as much as 55 gallons of hazardous waste or one quart of acute hazardous waste listed in Rule 1200-1-11-.02(4)(b), (c), or (d)5 in containers at or near any point of generation where wastes initially accumulate, which is under the control of the operator of the process generating the waste, without a permit or interim status and without complying with part 2 of this subparagraph provided he:
- (ii) Marks his containers either with the words "Hazardous Waste" or with other words that identify the contents of the containers.

Satellite containers used for the accumulation of hazardous waste near the point of generation were not marked "Hazardous Waste".

Mark all containers used to accumulate and/or collect hazardous waste with the words "Hazardous Waste".

The contingency plan that was reviewed at this inspection was dated March 1993. It is recommended this plan be reviewed and up dated as needed. A record of this review should be attached to the plan.

The Waste Reduction Act of 1990 requires that an annual progress report be completed which shall:

- (1) Analyze and quantify progress made, if any, in hazardous waste reduction, relative to each performance goal established under Section 305(b); and
- (2) Set forth amendments, if needed, to the hazardous waste reduction plan and explain the need for the amendments.

Complete a waste reduction progress report which includes the above information.

Tennsco Plant 2/3  
Page 5

I appreciate the time and cooperation I was given during my inspection. If there are any questions regarding this report contact Tom Yates at (615) 299-9922.

U.S.E.P.A. -- Region IV

STATE OF TENNESSEE  
DEPARTMENT OF ENVIRONMENT AND CONSERVATION

1/9/97  
DSWM  
L&C

IN THE MATTER OF:

TENNSCO CORP.

DIVISION OF SOLID  
WASTE MANAGEMENT

SWM CASE NO. 96-H0023

RESPONDENT

ORDER AND ASSESSMENT

Comes now, Justin P. Wilson, Commissioner of the Department of Environment and Conservation, and states that:

PARTIES

I.

Justin P. Wilson is the Commissioner of the Tennessee Department of Environment and Conservation, (the 'Department') and among other duties and responsibilities, is charged with the responsibility for administering and enforcing the Tennessee Hazardous Waste Management Act (T.C.A. Section 68-212-101 et seq.).

II.

Tom Tiesler is the duly appointed Director of the Division of Solid Waste Management (the 'Division'). He has received written delegation to administer and enforce particular aspects of the Tennessee Hazardous Waste Management Act.

III.

Tennsco Corp (hereinafter referred to as the 'Respondent' or 'Tennsco'), is an active company conducting business in Dickson, Tennessee. Its agent for service of process is Mr Keith C Stanton, 201 Tennsco Drive, Dickson, Tennessee 37055.

JURISDICTION

IV.

Pursuant to Tennessee Code Annotated (hereinafter "T.C.A.") Section 68-212-114(b), the Commissioner may assess a civil penalty of up to FIFTY THOUSAND

DOLLARS (\$50,000) per day for each day of violation of the Tennessee Hazardous Waste Management Act (the "Act"), or any rules and regulations promulgated pursuant to the Act, against any person who violates the Act or rules or regulations. In addition, the same statute authorizes the Commissioner to assess damages which may include any reasonable expenses incurred in investigating and enforcing the Act. T.C.A. Section 68-212-111 authorizes the Commissioner or his authorized representative to issue an Order for Correction to responsible parties for violations of the Act or rules or regulations promulgated thereunder.

V.

The Respondent is a "person" within the meaning of T.C.A. Section 68-212-104 and has violated provisions of the Act and the rules.

FACTS

VI.

The Respondent is a manufacturer of metal welded cabinets, lockers, shop equipment, and filing cabinets. The facility is comprised of six separate facilities located in Dickson, and employs approximately 300 people. Plant 2/3, the object of the inspection, consists of two buildings located on one continuous site and is considered one facility, with one EPA identification number. It is referred to as Plant 2/3 to acknowledge that there are two production buildings on the site. The facility is a fully regulated generator, and as such, may store hazardous waste on-site for less than 90 days without a permit, provided that specific provisions of the hazardous waste regulations are met. The Respondent's EPA identification number is TND 98-004-5390.

VII.

On February 7, 1996, a routine Compliance Evaluation Inspection (CEI) of a Large Quantity Hazardous Waste Generator was conducted at Tennsco Plant 2/3 in Dickson, Tennessee. On February 12, 1996, the Division issued Tennsco a Notice of Violation (NOV) for the violations cited on the aforementioned inspection. Following issuance of the NOV, the facility was invited to meet with the Division in a show cause meeting to discuss the alleged violations. The meeting was held on May 23, 1996. During the show cause meeting, a review of the hazardous waste manifests indicated that the company had complied with the 90-day storage requirements, but not the labeling requirements. In fact, the facility failed to properly label and place accumulation start

dates on thirty-six (36) drums. The other cited violations were demonstrated to have come under compliance since the inspection.

## **VIOLATIONS**

### **VIII.**

The Respondent is charged with having violated the following regulations promulgated under the Tennessee Hazardous Waste Management Act and its regulations.

### **IX.**

By failing to properly label and date accumulation storage drums, the facility violated Rule 1200-1-11-03(4)(e)2, which states:

Except as provided in parts 6, 7, and 8 of this subparagraph, a generator may accumulate hazardous waste on-site for 90 days or less without a permit or without having interim status, provided that:

- (ii) The date upon which each period of accumulation begins is clearly marked and visible for inspection on each container;
- (iii) While being accumulated on-site, each container and tank is labeled or marked clearly with the words, "Hazardous Waste."

### **X.**

By failing to document inspections on the hazardous waste accumulation area, the facility violated Rule 1200-1-11-03(4)(e)2(i)(I) which in turn refers to 40 CFR 265.174, incorporated by reference at Rule 1200-1-11-05(9)(a), which states:

The owner or operator must inspect areas where containers are stored, at least weekly, looking for leaks and for deterioration caused by corrosion or other factors.

### **XI.**

By failing to have installed the proper emergency alarm system, communications equipment, and spill control equipment, the facility violated Rule 1200-1-11-03(4)(e)2(iv) which in turn refers to 40 CFR 265.32, incorporated by reference at Rule 1200-1-11-05(3)(a), which states:

All facilities must be equipped with the following, unless none of the hazards posed by waste handled at the facility could require a particular kind of equipment specified below:

- (a) An internal communications or alarm system capable of providing immediate emergency instruction (voice or signal) to facility personnel;
- (b) A device, such as a telephone (immediately available at the scene of operations) or a hand-held two-way radio, capable of summoning emergency

assistance from local police departments, fire departments, or State or local emergency response teams;

- (c) Portable fire extinguishers, fire control equipment (including special extinguishing equipment, such as that using foam, inert gas, or dry chemicals), spill control equipment, and decontamination equipment; and
- (d) Water at adequate volume and pressure to supply water hose streams, or foam producing equipment, or automatic sprinklers, or water spray systems.

## **XII.**

By failing to provide adequate aisle space in the accumulation area, the facility violated Rule 1200-1-11-.03(4)(e)2(iv) which in turn refers to 40 CFR 265.35, incorporated by reference at Rule 1200-1-11-.05(3)(a), which states:

The owner or operator must maintain adequate aisle space to allow the unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of facility operation in an emergency, unless aisle space is not needed for any of these purposes.

## **ORDER**

WHEREFORE, PREMISES CONSIDERED, pursuant to the authority vested by T.C.A. Section 68-212-114 and T.C.A. Section 68-212-111, 1, Tom Tiesler, acting as the authorized representative of the Commissioner, hereby, after proper consideration of the harm done to the public health or the environment, the economic benefit gained by the violator, the amount of effort put forth by the violator to attain compliance, and any unusual or extraordinary costs incurred by the Commissioner, ORDER that:

1. The Respondent shall fully comply with Act and Division Regulations in the future.
2. The Respondent is assessed a CIVIL PENALTY in the amount of ONE THOUSAND DOLLARS (\$1,000.00).
3. The above assessed CIVIL PENALTY shall be paid to the Tennessee Department of Environment and Conservation within thirty (30) days of the receipt of this ORDER.

Issued this 5<sup>th</sup> day of January, 199 7, in the office of the  
Director of the Division of Solid Waste Management, Tennessee Department of  
Environment and Conservation.

  
Tom Tresler, Director  
Division of Solid Waste Management  
Tennessee Department of Environment  
and Conservation

#### **NOTICE OF RIGHTS**

The Respondent is hereby advised that in accordance with T.C.A. Section 68-212-113 it may secure a review of the necessity for or reasonableness of this ORDER by filing with the Commissioner, a written petition, setting forth the grounds and reasons for objection and asking for a hearing before the Solid Waste Disposal Control Board. This ORDER shall become final and not subject to review unless the Respondent petitions for a hearing within thirty (30) days after this ORDER is served. The hearing will be conducted in accordance with the Tennessee Uniform Administrative Procedures Act, T.C.A. 4-5-301 et seq.

All correspondence pertaining to this matter should be addressed to Charles Allen, L&C Tower, 5th Floor, 401 Church Street, Nashville, Tennessee 37243-1535, Phone (615) 532-0780.

RE: NOTICE OF VIOLATION  
Tennessee Hazardous Waste Management Act

Dear Mr. Bowker:

This letter confirms the observations and recommendations which were made during the Large Quantity Hazardous Waste Generator Inspection concerning your facility on January 6, 1999. The attached inspection report details the violations which were noted during the inspection.

Immediate action should be initiated to correct these violations. A follow-up inspection will be made after February 8, 1999 to verify that the appropriate corrective action has been taken.

If you have any questions concerning this letter or any part of the inspection report, please do not hesitate to contact me at (615) 299-9922.

Sincerely,

Tom Yates  
Division of Solid Waste Management

Rocky Bowker, Environmental Coordinator, Tennsco  
Charles Carr, Paint Supervisor, Tennsco

### REPORT PREPARED BY:

Tom Yates  
Tennessee Department of Environment and Conservation  
Division of Solid Waste Management  
Nashville/Joelton Environmental Assistance Center  
3000 Morgan Road  
Joelton, TN 37080  
Phone: (615) 299-9922  
Fax: (615) 299-8749

PURPOSE OF INSPECTION:

This inspection was conducted to evaluate the Tennsco Plant 2/3 compliance with the applicable requirements of the Rules and Regulations promulgated pursuant to the Hazardous Waste Management Act, T.C.A. 68-212-101 et. seq. and the "Tennessee Waste Reduction Act," T.C.A. 68-212-301 et. seq.

FACILITY DESCRIPTION:

Tennsco manufactures metal welded cabinets, lockers, shop equipment and filing cabinets. Tennsco was originally Diebold Company and began operation in 1958. In January, 1962, Diebold sold the company and it became Tennsco. Tennsco is comprised of six separate facilities located in Dickson and employs approximately 300 people. Plant 2/3, the object of this inspection, consists of two buildings located on one continuous site and is considered one facility, has one EPA identification number. It is referred to as Plant 2/3 to acknowledge that there are two production buildings on site. The Plant 2/3 buildings were acquired in 1980 and production began around that time. The production processes used at Plant 2/3 include stamping, welding, shaping and painting. The administrative offices are located at 201 Tennsco Drive and this is the location of Rocky Bowker's (the inspection contact) office.

The Standard Industrial Classification (SIC) codes used by Tennsco include 2542, 2851, 3316, 3429 and 3452.

Tennsco reported generating over 1000 kg of hazardous waste in at least each of 3 months on their most recent annual report. Based on this information, they are classified as a large quantity hazardous waste generator.

INSPECTION FINDINGS:

This inspection consisted of a records review and a facility inspection. The records review included annual reports, manifests, contingency plan, waste reduction plan, training records, and inspection logs. The facility inspection included the waste generation processes, satellite accumulation, the less than 90 day accumulation area, and used oil containers.

Hazardous waste is generated from Tennsco's wet paint operations. The following hazardous waste stream is currently generated:

Waste Stream #4: Paint/Solvent  
EPA Waste Codes: D001, F003, F005  
Estimated Monthly Maximum: 5500 kg

Tennsco  
January 13, 1999  
pg. 3

Generation Process: Cleaning of wet paint line equipment. Two satellite containers are in use for accumulation of this waste. One is located at what is known as the L & T paint line and the other is at what is known as the K-D line. Neither of these satellite containers were properly marked with the words "Hazardous Waste".

Major Hazardous Constituents: Methyl ethyl ketone, toluene

A significant amount of paint waste like material generated by the liquid paint operation in Plant 3 is suitable to be used as an ingredient to make new paint. This paint material is collected in a 300 gallon tote tank provided by the paint manufacturer and is returned to them when it is full. The paint manufacturer uses this paint material in manufacturing new paint.

A one time generation of a caustic soda waste occurred in 1997 from the hardening of a cleaning powder, which caused it to be unusable. This situation is now corrected by the changing to a liquid cleaner.

The less than 90 day accumulation area is in a separate building adjacent to the plant. At this inspection, only one drum marked "Hazardous Waste" was seen in the area. The area was disorganized and housekeeping was generally poor. This condition was in part due to preparation for moving the less than 90 day accumulation area to a new structure which is very near completion. A review of the regulations pertaining to the emergency equipment, alarms communication, and other requirements for hazardous waste accumulation areas is recommended to ascertain that the new area is in compliance.

It is also noted that Tennsco is in the process of converting their wet painting operations to powder painting. The elimination of wet painting has reduced their hazardous generation. It was explained that the intention is to eventually convert all painting to powder painting.

Containers used to accumulate used oil had not been marked with the words "Used Oil".

The records review revealed that no hazardous waste training was done in 1998, and therefore, the regulation requirement to conduct annual hazardous waste training had not been met.

#### VIOLATIONS:

Rule 1200-1-11-.05(2)(g)3 states in part:

Facility personnel must take part in an annual review of the training required in part 1 of this subparagraph. Part 1 (iii) states:

- (iii) At a minimum, the training program must be designed to ensure that facility personnel are able to respond effectively to emergencies by

familiarizing them with emergency procedures, emergency equipment, and emergency systems, including where applicable:

- (I) Procedures for using, inspection, repairing, and replacing facility emergency and monitoring equipment;
- (II) Key parameters for automatic waste feed cut-off systems;
- (III) Communications or alarm systems;
- (IV) Response to fires or explosions;
- (V) Response to ground-water contamination incidents; and
- (VI) Shutdown of operations.

Based on the training records reviewed, the last hazardous waste training was done approximately in June, 1997.

Rule 1200-1-11-.03(4)(e)2.(iii) states in part:

While hazardous waste is being accumulated on-site, each container and tank used for that purpose be labeled or marked clearly with the words "Hazardous Waste".

The satellite containers located at the paint lines known as L & T paint line and K-D paint line were not marked "Hazardous Waste".

Rule 1200-1-11-.11(3)(c)3(i) states:

Containers and aboveground tanks used to store oil at generator facilities, must be labeled or marked clearly with the words "Used Oil".

The containers seen that were used to accumulate used oil were not properly marked.

TCA 68-212-306 "Tennessee Hazardous Waste Reduction Act of 1990" states in part:

68-212-306. Annual progress report.--(a) All generators shall annually review their waste reduction plan and complete a hazardous waste reduction progress report which shall:

- (1) Analyze and quantify progress made, if any, in hazardous waste reduction, relative to each performance goal established under § 68-212-305(b); and
- (2) Set forth amendments, if needed, to the hazardous waste reduction plan and explain the need for the amendments.

Tennsco  
January 13, 1999  
pg. 5

- (b). Except for the information reported to the department under § 68-212-308, the annual progress report shall be retained at the facility and shall not be considered a public record under title 10, chapter 7, part 5. However, the generator shall permit any officer, employee or representative of the department at all reasonable times to have access to the annual progress report.
- (c) Large quantity generators shall complete the first annual progress report required under subsection(a) on or before March 1, 1993. Small quantity generators shall complete the first annual progress report required under subsection (a) on or before March 1, 1995. [Acts 1990, ch. 754, x 7; T.C.A., § 68-46-306.]

A hazardous waste reduction plan annual progress report, as required by the Waste Reduction Act of 1990, was not available for review.

REMARKS:

A fax from Rocky Bowker, dated January 7, 1999, addressing some of the questions that came up during the inspection, was received. With regard to paint waste generated at Plant 1, the fax verified this waste was non-hazardous and had been granted a special waste approval. The fax also explained the one time generation of caustic soda, EPA ID code D002 waste. In addition, it confirmed that no annual training had been done in 1998, and that steps were being taken to schedule training by the end of the month.

I appreciate the time and cooperation I was given during the inspection. If there are any questions regarding this report, contact Tom Yates at (615) 299-9922.

14. Comments

Mark changes on this form. Full instructions are given with Form PH-2022.

1. Organization's name. EPA ID CODE  
WABASH ALLOYS DIVISION OF CONNELL LIMITED PARTNERSHIP TND 98-776-6524
2. Waste name. Waste stream ID  
DUST FROM FURNACE BAGHOUSE 1
3. Give years waste generated : Date stopped : Frequency of generation  
1988 - ~~Present~~ /00/00 Continuously
4. Mark all appropriate hazard criteria below. EPA waste codes : SIC  
Ignitable (a), EP toxic (b), Corrosive (c),  
Reactive (e), Other toxic (f)  
CODES: B D006D008 3341
5. Physical form : % Solid : % Water : Lb./gal. : Chlorine PPM : BTU/lb.  
GRANULAR SOLID : 100.0 : 0 : 3.96 : 0 : 0
6. Generation rates in kilograms.  
Monthly maximum : Annual average : Max. amount stored : Max. days stored  
4545 77280 33,000 84000 13,600 20000 90
7. DOT shipping name : DOT hazard class : DOT ID code  
RG HAZARDOUS WASTE, SOLID, NOS O R M - E NA9189  
(D006, D008)
8. Describe generation process.  
BAGHOUSE TYPE DUST COLLECTOR FROM #2 AND #3 SECONDARY ALUMINUM GAS FIRED REVERBERATORY FURNACES.

\* ANNUAL REPORT SECTION \*\* LINES 9-11 -----

Report Year	Amount generated during year (kg)	Amount on site on first day (kg)	Amount on site on last day (kg)
1989	32,727	42,345	<del>4090</del> 4090

Amount Handled by site		TSDF handling/Waste management methods	
A : OFFSITE:	<del>76982</del> 76982	IN:	D80
B : ONSITE:		Y:	
C : ONSITE:		Y:	
D : ONSITE:		Y:	

10. Check the efforts undertaken to reduce the volume and toxicity in the generation of this waste during the reported year.
 

a. Reformulation/redesign of product	a( )	d. Substituting raw materials	d( )
b. In process recycling	b( )	e. Improved operations	e( )
c. Equipment/technology modification	c( )	f. No effort	f(x)
- g. Other - explain below: . . . . . g( )
11. Describe changes in volume and toxicity that those reduction efforts checked in line 10 produced last year compared to the previous year.
 

a. more toxic-a( )	b. less toxic-b( )	c. No change-c(x)	Amt of Reduction
			0 (kg)

(3.4)

## Hazardous Waste Notification

Tennessee Department of Environment and Conservation, Division of Solid Waste Management.

If below is incorrect, please change, by filling in the correct information. Return a copy of any changes.

1. Organization's full legal name WABASH ALLOYS DIVISION OF CONNELL LIMITED PARTNERSHIP		EPA identification code TNO 98-776-6524			
2. Mailing address 600 PRINTWOOD DR	City DICKSON	State TN	Zip code 37055		
3 a. Site address 600 PRINTWOOD DR, DICKSON, TN 37055	City	State	Zip code	County name Dickson	
b. Latitude (degrees, minutes & seconds) 36.2300		Longitude (degrees, minutes & seconds) 87.2100			
4. Owner name CONNELL LIMITED PARTNERSHIP		Phone with area code (615) 567-2600			
5. Manager or operator name DENNY LUMA (PLANT MANAGER)		Phone with area code (615) 446-0600			
6. Principal technical contact DENNY LUMA		Phone with area code (615) 446-0600			
7. Number of employees 67	Year operation began 1987	SIC codes (Primary SIC first, etc.) 3341, , ,		Job shop Yes No (N)	
8. Emergency contacts for 24 hours per day and 7 days per week					
a. Name DENNY LUMA		Time period covered 24 HRS		Phone with area code (615) 446-0600	
b. ANDY LUNN		24 HRS		(615) 446-0600	
c. PAUL GAMARY		24 HRS		(615) 446-0600	
d. EDWIN J STOLARZ		24 HRS		(219) 563-7461	
9. List current environmental (air, water, and radiological) permits. Give permit type, source, number and expiration date. In a range of related permits, give the first and last permit number. STATE AIR PERMIT . Q35313P exp. 3/1/97; 733198P exp. 3/1/94; 933707P under renewal 931749P under renewal					
10. Check the activities below you are engaged in related to recycling or burning hazardous waste as a fuel. a. Fuel blending or marketing of hazardous waste as a fuel. . . . . a( ) b. Transporting hazardous waste as fuel . . . . . b( ) c. Burning hazardous waste as fuel . . . . . c( ) d. Do you receive RCRA hazardous waste from off-site and recycle it? Yes ( ), No (X ).					
11. Certify that the information given in this document is true, accurate and complete by signing and dating. Signature of authorized representative Dennis B. Luma Title Plant Manager Date 2/18/94					
*** Below is for Department use only *****					
12. Date received 3-9-94	County code 22	Priority N	Generator Yes No N	Small Generator Yes No N	Special status
13. Date closed	Date regulated	Date deregulated

## Hazardous Waste Stream Report

Tennessee Department of Environment and Conservation, Division of Solid Waste Management.

Fifth Floor, L & C Tower, 401 Church Street, Nashville, TN 37243-1535

Please complete and/or correct. Certify and return regardless. Retain a copy for your records.

1. Organization's full name at facility. WABASH ALLOYS DIVISION OF CONNELL LIMITED		EPA identification code TND 98-776-c524	
2. Waste name. Use standard name from regulations whenever possible. DUST FROM FURNACE BAGHOUSE		Waste Stream number 1	
3. Give the years that this waste has been generated, e.g. 1975, 1982-. 1988- 1991, 1993		Date no longer generated. (MM/DD/YY) 05/15/93	
		Frequency of generation Continuous <input type="checkbox"/> Accidental/One time <input type="checkbox"/> Various <input checked="" type="checkbox"/>	
4. Circle all appropriate hazard criteria below. Ignitable (a), EP toxic (b), Corrosive (c), Reactive (e), Other toxic (f), TCLP (g)		EPA waste codes. (Primary first; six maximum.) D006, K001	
		SIC code for generating process. 3341	
5. Physical form Slit Gran (2)	% Solid 100.0	% Water .0	Vol. to wt. conversion (pounds/gallon) 3.760
			If used for fuel, chlorine content (PPM) 0.0
			BTU per pound 0.0
6. Generation rates. Supply all rates in kilograms. Monthly maximum (kg) 7,273.0		Annual average (kg) 12,356	
		Maximum amount stored on-site (kg) 12,356	
		Maximum days stored 90	
7. DOT shipping name RG HAZARDOUS WASTE, SOLID, NOS (D006, K001)		DOT hazard class 0 R M - E	
		DOT ID code 12 NA9189	

8. Describe generation process.

Baghouse type dust collector form #2, #3, #4, and #6 secondary aluminum gas fired reverberatory furnaces.

9. Chemical Characteristics.		Flash point >200		Reactive code None		Concentration units. For EP toxic and TCLP wastes, use PPM. % volume ( ), % weight ( ), PPM ( )	
pH 9.5							
Major and hazardous constituents. Give range of values at right.				lower value		upper value

# Hazardous Waste Stream Report - Front

JAN 06, 1989

1. Instructions for form PH-2022 for additional information and codes.

Organization's name.  
SHLAND CUSTOM CLEANERS

EPA ID CODE  
TND 98-102-4797

Site name.  
STE PERCHLOROETHYLENE BOTTOMS

Waste stream ID  
1

Years waste generated | Date stopped | Frequency of generation  
1987 | 100/00 | CONTINUOUS

Mark all appropriate hazard criteria below. | EPA waste codes | SIC  
Flammable (a), EP toxic (b), Corrosive (c),  
Reactive (e), Other toxic (f)  
DES: F | F002 | 7216

Physical form | % Solid | % Water | Lb./gal. | Chlorine PPM | BTU/lb.  
HEAVY SOLID | .01 | 10.000 | .0 | .0

Generation rates in Kilograms.  
Monthly maximum | Annual average | Max. amount stored | Max. days stored  
62 | 745 | | 30

Shipping name | DOT Hazard class | DOT ID code  
STE PERC | 0 R M - A | UN 1897

Describe generation process.  
~~HEAVY SOLID~~ GENERATED THRU DRYCLEANING PROCESS

ANNUAL REPORT SECTION \*\* LINES 9-11  
Port | Amount generated during year (kg) | Amount on site on first day (kg) | Amount on site on last day (kg)  
S | 91 | 0 | 0

Amount Handled	Handled	TSDR handling/waste management methods
A   91	On site?	T-63
B	Y N	
C	Y N	
D	Y N	

Describe the efforts undertaken to reduce the volume and toxicity in the generation of this waste during the reported year.  
Formulation/redesign of product a( ) d. Substituting raw materials d( )  
Process recycling b( ) e. Improved operations. e( )  
Equipment/technology modification c( ) f. No effort. f( )

Explain below:  
Safety Release  
Describe changes in volume and toxicity that those reduction efforts had in line 10 produced last year compared to the previous year.  
Toxic-a( ) b. less toxic-b( ) c. No change-c( ) Amt of Reduction

this waste is recovered, reclaimed, recycled, or reused, describe how.

*Safety Kleen*

Certify that this information is true, accurate and complete.  
Signature (Generator or authorized representative), title and date.

*Shirley Dine* *President X* *X 2-21-89*

Is for department use only.

Complete? Test results? Reasonable? Follow-up Initials  
Yes No Yes No Yes No Yes No *LD*

Not hazardous (1); Demonstrated not hazardous (2); Status Report  
Generator (3); Resource recovery (4);  
exemption (5); Hazardous (6);  
Metal (7); No longer generated (8); Variance granted (9); Condi-  
tionally exempt (A); Mixed radiological waste (R).

Comments.

1. Organization's full name at facility. Washland Custom Cleaners EPA identification code TND 98-102-4797

2. Waste name. Use standard name from regulations whenever possible. Filters Waste Stream number 2

3. Give the years that this waste has been generated, e.g. 1975, 1982-. 1987 Date no longer generated. (MM/DD/YY) Continuous Frequency of generation Continuous Accidental/ One time Continuous Various

4. Circle all appropriate hazard criteria below. Ignitable (a), EP toxic (b), Corrosive (c), Reactive (e), Other toxic (f). F EPA waste codes. (Primary first) F002 SIC code for generating process.

5. Physical form other solid Percent solid 1 water 10 Vol. to wt. conversion (pounds per gallon) 10 If used for fuel, chlorine content PPM 0 BTU per pound 60

6. Generation rates. Supply all rates in kilograms. Monthly maximum 45.4 (kg) Annual 465 (kg) Maximum amount stored on site 0 (kg) Maximum days stored 60

7. DOT shipping name Safety-Kleen Corp. DOT hazard class UN1897 DOT ID code TLN 000805911

8. Describe generation process. still sludgy from dry cleaning machine

\*\*\* ANNUAL REPORT SECTION \*\*\* Complete at end of each year and when terminating business for a waste which requires notification. Continue with line 12.

Annual generation and handling data. If waste was shipped off site, also submit Annual Shipping Report for hazardous waste generators. For handling in a permitted facility, use "T", "S", or "U" codes from instructions. For other handling, use "H" codes from instructions.

Report Year	Amount generated during year (kg)	Amount on site on first day of year (kg)	Amount on site on last day of year (kg)
1987	578	0	0

Amount Handled	Handled On site?	TSDF handling/Waste management methods	Amount Handled	Handled On site?	TSDF handling/Waste management methods
578	Y	T-63			

10. Check the efforts undertaken to reduce the volume and toxicity in the generation of this waste during the reported year. This reduction refers to generation processes and not treatment methods.
- a. Reformulation/redesign of product . . . . . a( )
  - b. In process recycling . . . . . b( )
  - c. Equipment/technology modification . . . . . c( )
  - d. Substituting raw materials . . . . . d( )
  - e. Improved operations . . . . . e( )
  - f. No effort . . . . . f( )
  - g. Other - explain below: . . . . . g( )

11. Describe changes in volume and toxicity that those reduction efforts described in line 10 produced last year compared to the previous year
- a. Increased toxicity-a( ) ; b. decreased toxicity-b( ) ; c. No change-c( )
